A vertex v is an eccentric vertex of vertex u if the

distance from u to v is equal to $e(u)$. The eccentric digraph $ED(G)$ of a graph (digraph) G is the digraph that has the same vertex as G and an arc from u to v exists in $ED(G)$ if and only if v is an eccentric vertex of u in G . F. Buckley and F. Harary, "Distance in Graphs," Addison ... Buckley F., Harary F. Distance In Graphs. ... Since distance is such a pervasive notion in graph theory, the time has come for a text focusing on distance in graphs. Distance in Graphs is based on the classic Graph Theory by F.H. and brings Graph Theory up to date on the topics covered. This text can be used by advanced undergraduates and ... DISTANCE IN GRAPHS. The standard distance $d(u, v)$ between vertices u and v in a connected graph G is the length of a shortest u - v path in G . This distance is a metric, that is, it satisfies the following three properties: 1. (1) $d(u, v) \geq 0$ for all vertices u and v , and $d(u, v) = 0$, if and only if $u = v$; 2. Distance in Digraphs - ScienceDirect Frank Harary (March 11, 1921 - January 4, 2005) was an American mathematician, who specialized in graph theory. He was widely recognized as one of the "fathers" of modern graph theory. Harary was a master of clear exposition and, together with his many doctoral students, he standardized the terminology of graphs. Frank Harary - Wikipedia vertex is the maximum distance between v and a vertex in G . The average ec-centricity $avec(G)$ of G is the mean of all

eccentricities of the vertices of G , i.e., $avec(G) = \frac{1}{|V(G)|} \sum_{u \in V(G)} e(u)$. The average eccentricity, introduced by Buckley and Harary as eccentric mean [5], was originally conceived as a performance indicator. The average eccentricity of a graph with prescribed girth
