If the surface that a profile is dependent on is not available any more, the profile changes to static mode. As Joe observed, the other alternative would have been to delete the profile when the surface is deleted. If the surface is available in the drawing again you may be able to change the profile back to dynamic mode. profiles switch dynamic to static? - Autodesk Community Professor Suntio's research interests include dynamic characterization and control design of switched-mode converters and the systems composed of them as well as the interfacing issues of renewable energy sources.
