Gas turbine cycles are presented in Figure

6.1.21. There are essentially three types of gas turbine cycles: first is the simple cycle, where the gas is exhausted directly to atmosphere; secondly, the regenerative cycle, where the exhaust gas is used in an exchanger (regenerator) to preheat the compressor discharge air prior to the combustor; and finally there is the combined cycle, where the

... Gas Turbine Cycle - an overview | ScienceDirect Topics A gas is defined as a state of matter consisting of particles that have neither a defined volume nor defined shape. It is one of the four fundamental states of matter, along with solids, liquids, and plasma. Under ordinary conditions, the gas state is between the liquid and plasma states. Definition and Examples of Gas in

Knowledgebase This chapter provides information on fundamentals of the liquefied natural gas (LNG) process and technologies. LNG is formed when natural gas is cooled by a refrigeration process to temperatures of between  $-159\text{ }^{\circ}\text{C}$  and  $-162\text{ }^{\circ}\text{C}$  at atmospheric pressure and the gas condenses to a liquid.
